### **Reasons for Allowance**

1. Claims 1-15 are allowed.

The following is a statement of reason for the indication of allowance:

Applicant's arguments, see REMARKS (pages 7-18), filed on 01/13/2006, with respect to the rejection(s) of claim(s) 1-15 have been fully considered and are persuasive.

Veerasamy discloses "In a next step 142, the serving visitor location register (VLR) 120 forwards the authentication request (AUTHREQ) to the home location register (HLR) 118 associated with the mobile station (MS) 126. In a next step 144, the home location register (HLR) 118 forwards the AUTHREQ to the authentication center (AC) 116 of the home system 112. The authentication center (AC) 116 of the home system 112 then determines that it is able to share shared secret data (SSD) 130 and authentication failure triggers (AFTRIGS) 128 with the serving system 114. The authentication center (AC) 116 returns an authentication request (authreq) to the requesting home location register (HLR) 118 and includes the shared secret data (SSD) 130 and authentication failure trigger (AFTRIGS) 128 parameters. In a next step 146, the home location register (HLR) 118 forwards the authentication request (authreq) to the serving visitor location register (VLR) 120" (see col. 7).

Sanchez discloses "Once the selection process is complete, a FEATREQ message 400 is sent from the pilot node 100 to the HLR 80. The appropriate change data FEATREQ flag is set within the FEATREQ message to allow updating the service feature(s) requested, while preventing other changes to the profile that would normally

occur if the flag was not set, such as location update, fraudulent activity detection, and/or authentication. Of course, if an AMS 20 (i.e., the telephone assigned to the profile) is used through the PSTN or pilot node 100 to request changes to the feature profile, all of the regular profiles features which are automatically updated generally by the network 9, or as a result of check and inquiries conducted by the HLR 80 (e.g., phone location, phone activity indicator, fraud detection, authentication, etc.), will be updated also, as is the case with the method illustrated in steps 200-310" (see col. 8).

Gallagher discloses "At time Td, the invalid MS transmits an invalid feature code string to the MSC/VLR 106A. The MSC/VLR 106A transmits an invoke feature request signal (FEATREQ) to the HLR/AC 302 at time Te. The HLR/AC 302 invokes the authentication technique of the present invention to determine that the invalid MS is not authentic. The HLR/AC transmits a failed feature request result to the MSC/VLR 106 at time Tf. Since the invalid MS is not authentic, the HLR/AC 302 can transmit a QUALDIR signal indicating that authorization was denied or an invoke registration cancellation signal (REGCANC) to delete the invalid MS from the MSC/VLR 106 database" (see fig. 9 and its description).

However, the combination of Veerasamy, Sanchez and Gallagher does not disclose nor fairly suggest a method for performing authentication in a communication system comprising an authentication server (AS), and a user profile store storing user profiles for users of the communication system, the method comprising:

transmitting from the authentication server to the user profile store a request for the user profile of a user;

receiving at the AS a response to the request;  
determining whether the response is indicative of an error; and  
if the response is indicative of an error, transmitting from the authentication server to the user profile store a message of a type that triggers the user profile store to perform a location update procedure in respect of the user.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
